1. User Segmentation Analysis

User Segmentation Table

User Type	Behavior	Engagement Level	Retention Probability
Frequent Shoppers	Purchase products regularly and browse daily	High	Very High
New Users	Recently joined the platform	Medium	Medium
Active Users	Frequently interact with products and categories	High	High
Inactive Users	Rarely use the application	Low	Low
High Engagement Users	Use wishlist, try-on, and recommendation features often	Very High	Very High
Virtual Try-On Users	Frequently use AR/virtual try-on tools	High	High

Key Findings

- Frequent shoppers generate the highest conversion rates.

- Users engaging with virtual try-on features show better retention.
 - Personalized recommendations increase browsing duration.
 - Inactive users require re-engagement strategies through notifications and offers.
-

2. Fashion Shopping Trends Research

Research Summary

Current fashion e-commerce trends indicate that Gen Z users prefer personalized, visually interactive, and mobile-first shopping experiences. AI-powered recommendations and virtual try-on technology are transforming online shopping behavior.

Trending categories include:

- Streetwear
- Oversized fashion
- Sustainable clothing
- Sneakers
- Influencer-inspired outfits

5 Insights Useful for Raritone

1. Gen Z users spend more time on apps with interactive experiences.
 2. AI-powered recommendations improve click-through rates.
 3. Virtual try-on features increase purchase confidence.
 4. Push notifications improve app revisit frequency.
 5. Social proof such as reviews and influencer content improves conversions.
-

3. Retention Analysis Task

Why Users Return to Shopping Apps

- Personalized product recommendations
- Discounts and flash sales
- Smooth browsing experience
- Loyalty rewards
- Fast checkout process

Why Users Uninstall Apps

- Slow app performance
- Irrelevant notifications
- Poor user experience
- Lack of personalization
- Complicated checkout systems

Retention Improvement Suggestions for Raritone

1. Improve AI-based product recommendations.
 2. Optimize app speed and loading performance.
 3. Introduce loyalty rewards and referral systems.
 4. Send personalized notifications based on user interests.
 5. Enhance virtual try-on quality and accessibility.
-

4. Engagement Heatmap Task

Heatmap Analysis

The engagement heatmap was designed to identify:

- Most active user timings
- Highly clicked features
- Most viewed categories
- High interaction sections

Key Observations

- Evening hours show the highest engagement.
- Virtual try-on receives strong interaction rates.
- Wishlist and checkout sections receive high activity.
- Personalized home recommendations increase user clicks.

Tools Used

- Microsoft Excel
 - Google Sheets
 - Power BI (optional visualization support)
-

5. Notification & Recommendation Analysis

How Notifications Improve Engagement

Notifications remind users about:

- New arrivals
- Discounts
- Cart reminders
- Trending products
- Personalized recommendations

These notifications increase return visits and improve retention.

3 Smart Notification Ideas for Raritone

1. Price drop alerts for wishlist items.
2. Abandoned cart reminders with limited-time discounts.
3. Personalized trend alerts based on browsing history.

3 Personalized Recommendation Ideas

1. Recommend products based on previous purchases.
 2. Suggest outfit combinations using AI styling.
 3. Display trending products from preferred categories.
-

6. Dashboard Enhancement

Improvements Added

- User segmentation charts
- Retention analysis graphs
- Engagement visualizations
- Trend comparison reports
- KPI enhancement visuals

Dashboard Benefits

- Better user behavior tracking
- Improved retention analysis
- Clear visualization of shopping trends
- Enhanced decision-making support

7. Daily Summary Report

Day 9 tasks focused on user segmentation, retention analysis, fashion shopping trends, engagement heatmaps, and dashboard enhancement. These activities improved understanding of customer behavior, recommendation systems, and user retention strategies.

Key Skills Improved

- Data visualization
- User analytics
- Segmentation analysis
- Dashboard reporting
- Retention strategy planning
